

Country Research Consultancy

DATA SERVICES

In Country Research Consultancy we compile an advance report that focuses on geo-data and local user expectations in a specific country around the world. We use our extensive world-wide local network, including local languages, to create a detailed consultancy report.

KEY FEATURES

Analyze how your current service scores compared to the report findings. Perform sourcing, data collection and digitization based on report findings. Deliver collected and digitalized sources in a pre-defined customer required data format.

TYPICAL USE CASES

For example, we focus on localities such as local (sub-state/provincial) administrative areas, neighborhoods, built-up areas, named (postal) areas and other geographic regions in a country. We include both formal and informal geographic regions. We apply this information to determine how geo-data should be used within map search, addressing, display, routing, t-b-t navigation, etc.

DELIVERY FORMATS

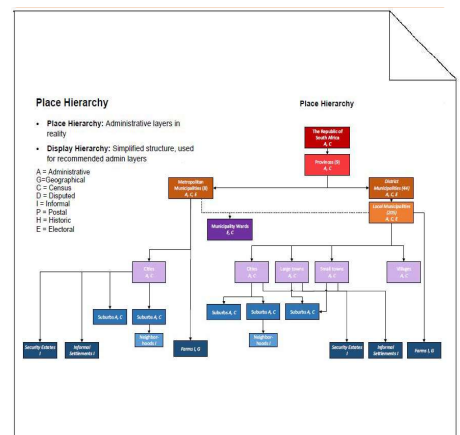

Shape (.shp/.shx/.dbf/.prj)

PROJECTION

The global projection system used in AND data is in decimal degrees (latitude and longitude) with WGS84 as datum, according to the ellipsoid model used for computations. The spatial reference id is EPSG:4326.

CHARACTER SET

The character-set used is the ANSI page code 1252 (latin1).
